EXECUTIVE SUMMARY:

COVID-19 and the Need for Action on Mental Health

Aa] dj \] i] Z COVID-19 Xgh h h, ci] Z ghi instance, a physical health crisis, it has the seeds of a major mental health crisis as well, if action is not taken. Good mental health is critical to the functioning of society at the best of times. It must be front and centre of every country's response to and recovery from the COVID-19 pandemic. The mental health and wellbeing of whole societies have been severely impacted by this crisis and are a priority to be addressed urgently.

Psychological distress in populations is widespread. Many people are distressed due to the immediate health impacts of the virus and the consequences of physical isolation. Many are afraid of infection, dying, and losing family members. Individuals have been physically distanced from loved ones and peers. Millions of people are facing economic turmoil having lost or being at risk of losing their income and livelihoods. Frequent misinformation and rumours about the virus and deep uncertainty about the future are common sources of distress. A long-term upsurge in the number and severity of mental health problems is likely.

MdoZdkZg heZX^ X edej aVi 'dch \odj eh VoZ showing high degrees of COVID-19-related psychological distress. Frontline healthcare work-Zgh VcY ghi gZhedcYZgh] VkZ WZZc ZmedhZY id numerous stressors and ensuring the mental health of healthcare workers is a critical factor in sustaining COVID-19 preparedness, response and recovery. In every community, there are numerous older adults and people with egZ-Zm1hi c\] ZVai] XdcY1 dch I] d VgZ i Zgg^ ZY VcY adcZan Eb di 'dcVaY' Xj ai 'Zh Vb dc\ X] /aYoZc VcY VYdaZhXZcih VoZ ZmVXZqVWiZY Wh family stress, social isolation, with some facing increased abuse, disrupted education and uncertainty about their futures, occurring at critical points in their emotional development.

initiatives to strengthen psychosocial support have sprung up.

Yet, because of the size of the problem, the vast majority of mental health needs remain unaddressed. The response is hampered by the lack of investment in mental health promotion, prevention and care before the pandemic. This historic underinvestment in mental health needs to be redressed without delay to reduce immense suffering among hundreds of millions of people and mitigate long-term social and economic costs to society.

MINIMIZING CONSEQUENCES

To minimize the mental health consequences of the pandemic, it is important to consider urgently the following three recommended actions:

Mental health actions need to be considered essential components of the national response to COVID-19. A whole-of-society approach for mental health in COVID-19 means:

- including mental health and psychosocial considerations in national response plans VXgdhh głakvci hzXidgh, [dgZnvb eaz hj eedging learning and nurturing environments for X] argz vcr ndj c\ ezdeaz I] d vgł xdc czr at home:
- responding proactively to reducing pandemic-related adversities that are known to harm
 b ZciVa] ZVa], [dgZnVb eaZ Ydb Zhi X k daZcXZ and acute impoverishment; and
- crafting all communications to be sensitive of their potential impact on people's mental

] ZVá], [dgZnVb e Z Wh Xdb b j c XVi c\ Zb eV-thy for people's distress and including advice for their emotional well-being.

Mental health and psychosocial support must be available in any emergency. Achieving this objective during the COVID-19 pandemic means:

- supporting community actions that strengthen social cohesion and reduce adcZacZhh, [dgZnVb e丞 hj eedg た\ activities that help isolated older adults stay connected;
- investing in mental health interventions
 i] Vi XVc WZ YZakZgZY gZb diZan, [dgZmVb eaZ quality-assured tele-counselling for frontline health-care workers and people at home with YZegZhh'dc VcY VcmZin;
- ensuring uninterrupted in-person care for severe mental health conditions by formally YZ c'c\ hj X] XVgZ Vh ZhhZci VahZgk XZh id WZ continued throughout the pandemic; and
- protecting and promoting the human rights of people with severe mental health conditions
 VcY ehnX] dhdX·VaY hVWal·Zh, [dgZnVb eZ, Wh monitoring whether they have equal access to care for COVID-19.

All affected communities will need quality mental health services to support society's recovery from COVID-19, and this requires investment in the following:

 using the current momentum of interest in mental health to catalyze mental health gZ[dgb h, [dgZnWb eaZ WhYZkZade ℃\ VcY

1. Impact of COVID-19 on Mental Health

Before COVID-19 emerged, statistics on mental health conditions (including neurological and substance use disorders, suicide risk and associated psychosocial and intellectual disabilities) were already stark:

- The global economy loses more than US\$ 1 trillion per year due to depression and anxiety.
- Depression affects 264 million people in the world.

Impact on brain health:

- COVID-19 can cause neurological manifestations, including headache, impaired sense of smell and taste, agitation, delirium, stroke and meningo-encephalitis.²⁰
- Underlying neurological conditions increase the risk of hospitalization for COVID-19, especially for older adults.²¹

•

2. Specific Populations of Concern

SeZX^ X edej &/i dch \gdj eh] VkZ WZZc V[[ZXiZY by COVID-19 in different ways. Some of these are highlighted in this brief:

> First responders and frontline workers, particularly workers in health and long-term care ea/n V Xgi X VagdaZ & \[i\cappa\] i \cappa\] Z dj i WgZV and saving lives. However, they are under ZnXZei dcVahigZhh, WZ & [VXZY I 1] ZmigZb Z I dg adVYh, Y^ Xj ai YZX1h dch, gh h d[WZXdb - ing infected and spreading infection to families and communities, and witnessing deaths of patients. Stigmatization of these workers is common in too many communities. 31 There have been reports of suicide attempts and suicide death by health-care workers. 32

Reports from Chile, Italy, Spain, the Philippines, the United Arab Emirates, the United Kingdom and the United States of America document how dedicated teams provide mental health support for health-care workers. All countries need to ensure that this vital section of socigteycorn-12.4 (ot)-7.7 (p4 (n)-123)

Mental health of healthcare workers during COVID-19 pandemic

- In Canada, 47% of health-care workers reported a need for psychological support.³³
- In the People's Republic of China, healthcare workers reported high rates of depression (50%), anxiety (45%), and insomnia (34%).³⁴
- In Pakistan, large numbers of health-care workers have reported moderate (42%) to severe (26%) psychological distress.³⁵

Mental health requires much larger overall investment. An ongoing, longstanding issue is that mental health — across health, social, education and other sectors — has been heavily underfunded. Countries spend on average only 2% of their health budgets on mental health.

response and recovery activities. The inclusion d[b ZciVa] ZVai] & Zmhi & UN COVID-19 response mechanisms is critical in the updated WHO Strategic Preparedness and Response Plan,65 the updated Global Humanitarian Response Plan66 and the UN Framework for the Immediate Socio-economic Response to COVID-1967 and the Secretary-General's UN COVID-19 Response and Recovery Fund.68

Mental health and psychosocial support have relevance to health, protection and social services, nutrition, labour, education, justice and other domains of government. In numerous countries, the UN agencies are assisting national governments in establishing national strategies and national multisectoral coordination mechanisms on the pandemic response.

They can make sure that mental health is fully considered across governments' health, social and economic responses and recovery plans.

Moreover, UN Resident and Humanitarian

Coordinators can ensure that mental health and psychosocial support is included in coordination and planning both now and for the longer term.⁶⁹

Mental health will remain a core concern even as countries emerge from the pandemic and
